

## Grade VI – Reuse of E-Waste

E-waste are the toxic legacy of our digital age. We are throwing away literally tons of electronics because don't know how to fix them. There aren't enough recyclers in the world, to handle all the electronics we are throwing away. When electronics end up in landfills, toxics like lead, mercury and cadmium leach into the soil and water. Looking at the horrifying statistics of the amount of e-waste produced by us, there is a pressing need to educate

people to reduce, reuse and appropriately recycle e-waste. Grade VI initiated this thought through an inter house competition based on the topic Reuse of E-waste. The competition was held on 18 July,

2018. Students were divided into groups, house wise. Creativity and innovation was in the air as the students enthusiastically made Wall hangings and decorative items using E-Waste like key board, cell phone, and many other items.
